

Alison Green, Web Designer and Front-End Developer

021 932 987 • alison@webweaver.co.nz • webweaver.co.nz

- Highly developed skills in client liaison, project planning and scoping, IA/UX and wireframing, web design, front-end development, responsive design/development, NZGWS accessibility compliance, writing and editing, validation, browser/device testing, proofreading, writing technical documentation, QA testing and CMS training; based on over 20 years' experience.
- Designed and/or developed over 250 websites including 80+ government projects since 1996 – and have done contract work with 11 in-house web teams and 26 web design agencies.
- Extensive experience includes sites for BNZ Bank, Dept of Internal Affairs (Govt.nz), MBIE, Toyota, RadioNZ, Co-op Bank, Fairfax, Kirkaldie & Stains, Sorted, Museums Wellington, NIWA, WellingtonNZ, Ministry for the Environment, Optimisation, Historic Places Trust, Salvation Army, NZWood, Weta, NZ String Quartet, Tourism NZ, Education NZ, Māori Media Network, LINZ, WWF-NZ, KiwiSaver, National Library, Office of Film & Literature Classification, Ministry of Education, DoC, Victoria Uni, WOMAD, Contact Energy, Fonterra, Transpower, and Icebreaker.
- Expertise in HTML, XHTML, HTML5, CSS, CSS3, LESS, SASS and jQuery for a wide range of CMSs including Drupal, Expression Engine, Joomla!, MySource Matrix, Plone, Shado, SilverStripe, Sharepoint, Sitecore, WordPress and .net, plus some bespoke systems.
- Strong experience in designing and developing websites including responsive designs, with expertise in cross-browser, cross-device, cross-OS design, development and testing.
- Effectively manage projects and timelines, always delivering my work on time and within budget. As an experienced employee and contractor I can quickly grasp the requirements of any web design project and work as part of any team, whether Agile or waterfall-based, requiring very little supervision or instruction.
- Energetic and intelligent self-starter with an eye for detail and an understanding of the big picture, a logical and creative mind and a commitment to excellence. Easy to work with, enjoy teamwork (in which I tend to take on the role of Completer Finisher), mentoring, and thoughtful collaboration with a wide range of people. I specialise in the calm and methodical approach when working to a deadline. I'm practical, organised and sensible and I love problem-solving. I am a versatile and focused perfectionist giving 100% to every project, and I don't stop until it's done.

Further details about my web design experience, skills and expertise can be found in my web portfolio, at <http://webweaver.co.nz>

Strengths

My strengths in web design/development lie in my proven ability to:

- work as part of a team, either using waterfall or Agile methodologies, sharing my knowledge
- build strong, ongoing relationships with my clients and colleagues (often asked back)
- develop logical, user-focused and easy-to-navigate site architecture within a visually appealing and uncluttered design, maintaining brand consistency between print and web
- design and build websites which conform to NZ government accessibility guidelines; which validate to W3C standards; and which contain clean and tidy code
- code HTML/CSS/jQuery by hand to a very high standard, using LESS and SASS as pre-processors
- wireframe, design and build responsive websites
- use the wide range of software necessary for the creation of websites and graphics, as well as video and audio editing software
- follow sensible version control protocols using a wide range of SVN software
- research and write or edit content, proof-read and maintain quality control
- deliver fully-tested (cross-platform, cross-browser, on multiple devices) error-free websites or templates within time and budgetary constraints, requiring minimal supervision.

I was a member of the 2007 New Zealand team that won the inaugural international website building competition, FullCodePress – having been selected as the Captain's Choice All-Rounder.

I was nominated for four ONYA awards in 2010, when three of my websites were finalists in the categories of *Best Accessibility*, *Best Use of HTML and CSS* (two sites) and *Best Content (Personal)*. In 2011 the WellingtonNZ site I helped build for Chrometoaster was a finalist in the *Most Outstanding Website* category, the ONYAs' top award.

Other skills

I have 5 years' experience managing groups of creative people in high-stress environments, and practice the art of mutually-satisfying compromise. I'm skilled in production management and the organisation of large-scale events, festivals and shows. I have strong presentation and communication skills, and I'm a good teacher and mentor. I'm also an experienced public speaker, and took part in many TV and radio interviews when I was an event manager and publicist.

Education

BSc. Honours Degree in Biological Sciences

University of Nottingham, England

Post Graduate Certificate of Education in primary teaching

Trent Polytechnic, Nottingham, England

Interests

I play the caixa drum in Wellington's street samba group, Batucada. I can also juggle fire.

Web design career snapshot - More details at <http://webweaver.co.nz/about/career-snapshot>

1996-present	WebWeaver Productions	Information architect, UX designer, web designer, front-end developer (freelancer)
2016-present	Acumen Republic	Web consultant, WordPress developer (contractor)
2016-2017	Transpower	UX, designer, front-end developer (contractor)
2016	Touchcast	Front-end developer (contractor)
2015-present	Ramp Brand Communications	Web consultant, front-end developer (contractor)
2015-present	Office of Film & Literature Classification	IA, web designer, front-end developer (contractor)
2014	Bank of New Zealand	Front-end developer (contractor)
2013-2014	Dept of Internal Affairs	Web designer, front-end developer (contractor)
2013-2014	inov8	Front-end web developer (contractor)
2013-present	Insight Consultants Ltd	Web consultant, front-end developer (contractor)
2013	Proximity	Front-end developer (contractor)
2013	Department of Corrections	Web content co-ordinator (contractor)
2012	Co-operative Bank	Front-end developer (contractor)
2012-2013	Radio New Zealand	Front-end developer (contractor)
2012	Heyday	Front-end dev, SilverStripe integrator (contractor)
2012	Fairfax Digital	IA, web designer (contractor)
2011	Learning Media	Web editor (contractor)
2010-2011	Designworks	Front-end developer (contractor)
2010	Datacraft	IA, web designer, front-end developer (contractor)
2010	Plan A	IA, web designer, front-end developer (contractor)
2010-2012	Chrometoaster	Front-end developer (contractor)
2009-2010	Shift	Front-end developer (contractor)
2009	Badger Communications	Flash developer (contractor)
2009-2011	Optimization	IA, web designer, front-end developer (contractor)
2009	DNA	Front-end developer (contractor)
2009	Origin Design	Front-end developer (contractor)
2007-2008	Optimization	Web designer, front-end developer (contractor)
2006-2008	Shift	Website producer (employee)
2006	Base Two	Senior web integrator (employee)
2005-2007	LINZ	Web developer (contractor)
2005	Shift	Front-end developer (contractor)
2004-2005	Origin Design	Front-end developer (contractor)
2004	Oryx Technologies	Web designer, front-end developer (contractor)
2004-2005	CWA New Media	Web designer (contractor)

2003-2004	Open Polytechnic	Technical editor - web design course (contractor)
2001-2003	Origin Design	Senior web developer (employee)
2001	Origin Design	Front-end developer (contractor)
2000	Modus Seminars	Course developer, writer, tutor (contractor)
2000	Mission Hall	Front-end developer (contractor)
2000	Base Two	Front-end developer (contractor)
1996-1999	CWA New Media	IA, web designer, front-end developer (contractor)

Selected case studies

I've worked on over 250 web projects since 1996, and my online portfolio contains over 200 case studies. Here's a quick snapshot of just a few.

There are many more at <http://webweaver.co.nz/case-studies>

Transpower, June 2016 - March 2017 – UX, designer and front-end developer

Transpower's Grid Operators who manage the National Grid were using an old application that had been co-opted from another team and wasn't entirely fit for purpose in its new environment. They wanted a new application custom-made for the Grid Operators – based on the original application but reinvented to match exactly what they needed. They felt it would be useful to have a UX designer on the team, to help them figure out how to turn their requirements into reality. Several processes had to be integrated with other Transpower applications, sharing and updating information/data between apps, which added another layer of complexity to the project.

I was responsible for information architecture, UX consultation and design, wireframes and schematics (keeping these updated on an ongoing basis), responsive application design, front-end development of the application screens, HTML5, CSS3, close collaboration and consultation with the developer, working on the integrated application within Visual Studio once the developer had built the app, post-integration testing and QA. I also helped the BA to maintain and update the requirements.

The project was carried out within an Agile work environment. The process was highly consultative, with expert opinions being sought daily from our two SMEs (Grid Operators from Auckland and Christchurch) and also from the rest of the team, particularly our BA, our chief tester, our developer, and our system integration and security specialist.

My aim was to design and build an app that was easy to use, logical, completely intuitive, met all of their requirements and was visually clean and user-friendly. Grid Operators are the Air Traffic Controllers of Transpower – their job is stressful and includes life-or-death job tracking and record keeping, so I wanted this new app to be as stress-free as possible, and to make their job easier.

Achievements:

- I was initially contracted for 6 weeks-ish, but the team found my input so useful that I ended up being kept on for almost the entire project – nearly 6 months – and then asked back for a month to work on phase 2 - additional screens for the app.

- I was the first UX designer that Transpower have used, and my contribution meant that, unlike in previous projects where their developers were expected to translate the requirements into an application themselves, our developer was freed up to concentrate on her core skill - development – rather than having to do all the UX thinking as well.
- My visual representation of the project requirements:
 - Was more meaningful for the “visual” members of our team than the written requirements. It ensured that we were all on the same page, as visual wireframes are much clearer and less open to different interpretations.
 - Allowed our BA to check that all her requirements were complete and made sense.
 - Provided our SMEs with a visual representation of the application which they could immediately relate to and improve.
- The act of building the wireframes forced me – and by extension, the rest of the team – to think through the whole application, allowing us to pick up holes, inconsistencies and illogic within them, long before we got to the development stage. On a couple of occasions this resulted in my doing a complete re-think of how particular processes should work and how they would integrate with other Transpower apps – which saved the project a considerable amount of time and wasted effort in the long run.
- My continual updating of existing wireframes as we worked our way through the sprints and added more functionality and screens provided us with an ongoing record of our thought processes - a “visual versioning” of the project.
- My wireframes acted as a blueprint for the developer, which meant that she could develop, rather than having to decide how things worked and where things went (which is how they had worked in the past). This meant that:
 - We ended up with a much better product because the developer could concentrate on developing – and as a result had sufficient head-space to suggest further improvements.
 - There was a consistency between screens because our layouts had been drawn up in advance rather than put together on the fly.
 - The overall design was a huge improvement over previous Transpower applications, as it was done by a designer (me) rather than by a developer.
- After the project was complete and the app launched, the feedback from the Grid Operators was overwhelmingly positive – and I was invited to make a presentation of the app and the role of the UX designer to other teams within Transpower so that they could see the benefits of working in this way.

OFLC, November 2016 - June 2017 – designer and front-end developer

I have carried out a number of web projects for the Office of Film & Literature Classification over the past ten years, including two redesigns and rebuilds of each of their two websites – the main site and their website for NCEA students. They had always requested Dreamweaver templates as their staff knew how to use Dreamweaver and enjoyed it. In the proposals for the most recent redesign/rebuild of both sites I had suggested converting the sites to the SilverStripe CMS. In 2016, after a change of staff, it became clear that the time had come to do this. I had designed and built both sites with this in mind, so it was a straightforward process to work with my programmer to convert both sites to SilverStripe. The challenging and tricky bit was to create a modular system

within the CMS that would enable the website editors to continue to build the complex HTML layouts that already existed on the site, without having to code the HTML any more.

I was responsible for client liaison, proposal and quote, project management, scoping, CMS UX/IA, wireframes and schematics, post-integration template testing, e-government compliance testing, browser and device testing, CMS training, and ongoing support. I also did the majority of the content-loading and all the QA prior to launch.

Achievements:

- Facilitated the successful conversion of the existing websites from Dreamweaver to SilverStripe without having to rebuild or redesign any of the page templates.
- Worked with my programmer Tom St George to completely customise the CMS so that editors could still include all the complex HTML formatting they were used to, without having to code the HTML any more. SilverStripe does not do this out-of-the-box, so we worked together to visualise what the editors should see/do (me) and to build this within SilverStripe (Tom).
- Ran successful CMS training workshops for a large group of OFLC staff whose previous experience with HTML/CSS and CMSs ranged from none to expert web editors.

Bank of New Zealand, Sept-Dec 2014 – front-end developer

<http://www.webweaver.co.nz/case-studies/list/bnz-community>

The Community web project - an interactive community and forum for BNZ customers - was nearing completion. They needed someone to finish it off, tidy it up, and get it over the line.

I initially joined the in-house web team for four weeks to carry out the front-end development and was responsible for the HTML5 and CSS3 (SASS) coding, browser and device testing. The project was managed using informal Agile methodology and the responsive website was set within the Lithium CMS framework.

Achievements:

- Picked up this project at a crucial (and late) stage of its development, figured out what needed doing to get it ready for launch, and delivered this to the client within a month.
- My contract was twice extended for an additional month beyond the original contract period, as the client liked my work and wanted me to continue to improve the site post-launch.

Govt.nz, Dec 2013 - June 2014 – designer and front-end developer

<http://www.webweaver.co.nz/case-studies/list/govt-nz>

A ground-breaking project run by the Department of Internal Affairs, that seeks to improve the way that government communicates with citizens online. It is based on the UK all-of-government website, GOV.UK, and both sites are user-focused, with user testing as their foundation.

I was taken on to replace the original designer/front-end developer halfway through the Beta phase. I was responsible for UX research, UX proposal-writing and UX design, responsive web design, responsive front-end development within an instance of the Government's Common Web Platform (CWP), browser and device testing, government web standards accessibility compliance

and testing to the very highest level, post-integration testing and QA, attending regular team meetings and doing regular "show and tell" updates for the major stakeholders within DIA.

Achievements:

- The site was listed as one of the top 8 government websites in the world by FutureGov Digital and featured in their e-book, *Design secrets of the world's best e-government web sites*.
- Took over this project from my predecessor who had provided no handover documentation and with elements half-completed, so I sorted out the templates and stylesheets, figured out what he was aiming to do, completed some elements and improved on others before moving on to complete the front-end dev sitewide.
- Met the design brief I had been given, which was to re-design the site to consciously move away from the GOV.UK design without changing too much of the HTML, and to give the site a much more Kiwi flavour. We delivered a fantastic, beautifully-written product that was an enormous improvement on its predecessor, newzealand.govt.nz.

Radio New Zealand, Oct 2012 and Feb/May 2013 – front-end developer

<http://www.webweaver.co.nz/case-studies/list/radio-nz>

I had first met Richard Hulse when we were both up for the same ONYA awards in 2010. The Radio New Zealand website had won both awards, and now that it was in need of an update, Richard decided to ask me to build the templates for him.

I was honoured! I was responsible for the HTML (HTML5), CSS (including CSS3 and LESS) and jQuery for the new design, incorporating a very high level of accessibility compliance into the build. I also did some design development, plus testing and QA of the completed templates, and a couple of days of additional templating once the web team had begun to integrate their existing content into the new templates.

Achievements:

- Improved on the original design by tweaking the colour palette to make it fully accessible and adding missing colours where required.
- Incorporated an extremely high level of accessibility into my HTML/CSS build, ensuring that the website is usable by everyone.
- Successfully built and delivered a full set of templates based on the 960 grid - to a standard that allowed the web team at a later date to add responsivity to the website without having to rebuild it – saving them considerable time and money.

Holmes Consulting Group, Sept 2009-Apr 2010 – IA, designer, front-end developer

<http://www.webweaver.co.nz/case-studies/list/holmes>

The international structural engineering firm Holmes Consulting Group asked for a completely new photography-centered design, new HTML/CSS templates, and a new CMS, which would be populated with all-new content.

I was responsible for the initial quote, information architecture, site schematics, ongoing project

management and client liaison, web design, HTML and CSS, jQuery, testing, putting together the skeleton site in SilverStripe, CMS training, QA and proof-reading, and ongoing support.

Achievements:

- Created a beautiful design based on the Fibonacci Sequence which the client was so inspired by, she used it as the central theme of her presentation of the new website to company staff.
- Used JavaScript to enable the website to display five times as many photographs as there was space on the page, by creating an innovative sliding effect with multiple photo strips.
- Designed and built this website from start to finish with the help of my WebWeaver programmer Tom St George, delivered on-time and on-budget.

Ministry for the Environment, April-Jun 2009 – front-end developer

<http://www.webweaver.co.nz/case-studies/list/mfe>

The 13,000-page Ministry for the Environment website was looking old and tired, and the Ministry wanted a medium-term website redesign solution that would allow them to keep their old legacy content, while bringing the look & feel up to date. The Ministry web team needed to be able to transfer their entire website into our new design and set of best-practice e-government compliant Dreamweaver templates as painlessly as possible, and the CSS also had to include matching styles for all their old content code.

I was responsible for the initial quote, some information architecture, site schematics, ongoing project management and client liaison, HTML and CSS, jQuery and JavaScript, e-government and accessibility compliance, testing, site delivery and ongoing support.

Achievements:

- Created a templated design that demonstrated web design and e-government best-practice, while being flexible enough to be able to handle and display thousands of pages of legacy content, coded using many different techniques over a number of years.
- Built Dreamweaver templates to a totally new design but which matched the old templates in terms of structure, so that when the web team came to do the global 'find and replace' that would replace their old templates with our new ones, the site held together, and could be trusted to display the vast majority of pages as expected, without the web team needing to view all 13,000 pages before launch.
- Matched the styles of my new best-practice HTML to a long list of legacy code that was already being used on the site and which we had to take into account, providing identical CSS styles for both old and new HTML. This allowed old pieces of code to display in exactly the same way as the new code, without the need to update the content all at once.

Appendix A: Web design and development listing

The following is a chronological list of some of the 250+ websites I have worked on since 1996. They are listed in reverse chronological order, with the most recent at the top.

Award-winning sites have a * after the website name, one * for each award.

URLs in green indicate a clickable link to the live website. URLs (in brackets) indicate that the site has been re-designed since I worked on it. These are not clickable.

Dates	Website	URL	Work carried out
2017	Kindergarten Association of NZ	in progress	New SilverStripe website
2017	Aceso Health	in progress	New SilverStripe website
2017	Wild Workouts	in progress	New WordPress website
2017	CareerBytes	careerbytes.co.nz	Client liaison, project management, website alterations and updates, design development, HTML5, CSS3, browser and device testing (SilverStripe CMS)
2016 - 2017	TEAM Asparona	teamasparona.com	Helping to complete the site and get it launched – client liaison, project management, WordPress wrangling, content loading, browser and device testing (WordPress CMS)
2016 onwards	Vision Wallcoverings	visionwall.com.au	Ongoing maintenance and updates, webmaster (WordPress CMS)
2016 - 2017	Marlborough Vintners Hotel	mvh.co.nz	Theme selection, client liaison, project management, IA/UX, wireframing, HTML5, CSS3, responsive web design/dev, some content loading, graphics, CMS training (WordPress CMS)
2016 onwards	The Play Press	playpress.co.nz	Ongoing maintenance and updates, webmaster (Joomla! CMS)
2016 onwards	Major Consulting Group	majorconsulting.co.nz	Theme selection, client liaison, project management, IA/UX, wireframing, HTML5, CSS3, responsive web design/dev, content loading, graphics, CMS training (WordPress CMS)

Dates	Website	URL	Work carried out
2016 - 2017 onwards	Office of Film & Literature Classification	classificationoffice.govt.nz and censor.org.nz	Conversion of Dreamweaver templates to two matching SilverStripe sites - client liaison, project management, CMS UX/IA, wireframing, browser and device testing, post-integration template testing, e-government compliance testing, content-loading/formatting, proof-reading, QA, CMS training (SilverStripe CMS)
2016 & 2017	Transpower	web-based application accessible to Transpower staff only	UX consultation and design, responsive application design, responsive front-end development, HTML5, CSS3, LESS, graphics, browser and device testing (bespoke .net build)
2016	New World Club Card	clubcard.co.nz	Front-end development for two sets of templates (mobile and desktop), HTML5, CSS3, SASS, graphics, browser and device testing (bespoke CMS)
2016	Education New Zealand	enz.govt.nz	Responsive front-end development, HTML5, CSS3, SASS, graphics, e-govt accessibility compliance, browser and device testing (SilverStripe CMS)
2016	Aspiring Walls	aspiringwalls.co.nz	Host/server transfer and migration, ongoing maintenance and updates, webmaster (WordPress CMS)
2015	Grosvenor KiwiSaver	no longer online	Client liaison, project management, UX/IA, wireframing, design development, responsive web design/dev, HTML5, CSS3 for a new online registration process (asp.net site)
2015 - 2016	Office of Film and Literature Classification	(classificationoffice.govt.nz)	Client liaison, project management, UX/IA, wireframing, responsive web design/dev, graphics, HTML5, CSS3, LESS, jQuery, e-govt accessibility compliance, browser and device testing, content-loading/formatting (Dreamweaver templates)
2015	ServicelQ	multiple backend and frontend systems, websites and apps	UX/IA, wireframing, design, HTML, CSS3, system overview and consolidation consultation

Dates	Website	URL	Work carried out
2015 onwards	Beer Belly Jellies	beerbellyjellies.co.nz	Improve design, layout and formatting of existing themed WordPress website
2015 onwards	Booker Martin Communications	bookermartin.co.nz	Theme selection, client liaison, project management, IA/UX, wireframing, HTML, CSS3, responsive web design/dev, content loading, graphics, CMS training (WordPress CMS)
2015 - 2016 onwards	Bubbly Bub	bubblybub.co.nz	Finish off website updates and prepare site for re-launch. Conversion to responsive design in phase 2 (SilverStripe CMS)
2015	PS Network	(psnetwork.org.nz)	Website updates in a hurry (SilverStripe CMS)
2015 onwards	Off The Tracks	offthetracks.co.nz	Consultancy, WordPress wrangling, problem-solving, web host transfer and management (WordPress CMS)
2015 onwards	Education Council	educationcouncil.org.nz	Web consultancy, content wrangling and updating, client advocacy, SEO (Drupal CMS)
2015	ACE Aotearoa	aceaotearoa.org.nz	Webmaster, content-loading, proof-reading, graphics (Drupal CMS)
2015 onwards	Business Leaders' Health & Safety Forum	zeroharm.org.nz	Webmaster, content-loading, proof-reading, graphics, content audit, IA/UX review and re-modelling, wireframing, homepage restructure and redesign, responsive HTML5, CSS3, social media consultation (SilverStripe CMS)
2014	Bank of New Zealand	(community.bnz.co.nz)	HTML5, CSS3, problem-solving this difficult build and preparing it for launch. Agile working environment (Lithium CMS).
2014 - 2015	Office of Film & Literature Classification – information for students	(censor.org.nz)	UX/IA, wireframing, design development, responsive web design/dev, graphics, HTML5, CSS3, LESS, jQuery, e-govt accessibility compliance, browser and device testing, content-loading/formatting (Dreamweaver templates)

Dates	Website	URL	Work carried out
2014	Office of Film & Literature Classification	(classificationoffice.govt.nz)	Updating the design and build of the homepage. UX/IA, wireframing, design development, HTML5, CSS3, jQuery, e-govt accessibility compliance, testing (Dreamweaver templates)
2014	Integrated Foods intranet	intranet – not externally accessible	Design development, HTML5, CSS3, graphics, (SharePoint CMS)
2013 - 2014	Govt.nz	(govt.nz)	IA/UX, wireframing, best-practice research and recommendations, design, HTML5, CSS3, SASS, jQuery, responsive design/dev, e-govt and accessibility compliance, browser and device testing, Agile working environment (SilverStripe CMS)
2013	Wet Paint Property Maintenance	no longer online	IA/UX, wireframing, responsive web design/dev consultation, CMS training, theme selection (WordPress CMS)
2013 - 2015 onwards	Hearts n Roses	heartsnroses.co.nz	Theme selection, IA/UX, wireframing, HTML, CSS3, responsive web design/dev, content loading, graphics, e-commerce functionality, CMS training (WordPress CMS)
2013	PSA intranet	intranet – not externally accessible	HTML5, CSS3, testing, QA (SharePoint CMS)
2013	Aquavilla	(aquavilla.co.nz)	Design development, restyling, graphics, XHTML, CSS3, jQuery, responsive web design/dev, testing (WordPress CMS)
2013 - 2015 onwards	WebWeaver Productions	webweaver.co.nz	IA/UX, wireframing, responsive web design/dev, HTML5, CSS3, LESS, graphics, jQuery, writing, editing, content-loading, accessibility compliance (SilverStripe CMS)
2013 - 2015 onwards	Occupational Therapy New Zealand	otnz.co.nz	Client liaison, project management, scoping, IA/UX, wireframing, design, HTML5, CSS3, LESS, jQuery, accessibility and e-govt compliance, testing, building the skeleton site, training, QA and ongoing support (SilverStripe CMS)

Dates	Website	URL	Work carried out
2013	Electrical Workers Registration Board	(ewrb.govt.nz)	IA/UX, wireframing, responsive web design/dev, HTML5, CSS3, jQuery, testing (OSs, browsers, devices and platforms), QA (SilverStripe Common Web Platform CMS)
2013	Toyota New Zealand	toyota.co.nz	Design development (improve style consistency), HTML5, CSS3, SASS, jQuery, testing, QA (SilverStripe CMS)
2013	Department of Corrections	(corrections.govt.nz)	Web editing, content audit, content-loading, development oversight consultancy (MySource Matrix CMS)
2013	Licensed Building Practitioners New Zealand	business.govt.nz/lbp	IA/UX, wireframing, design consultation and development (Plone CMS)
2013	Ideas Rock	(ideasrock.com)	HTML5, CSS, WordPress website update and upgrade
2013	Fairfax Australia - in-house web application	in-house prototype	HTML5, CSS3, SASS, Compass, jQuery, testing
2013	Zumo Coffee	proposal	Client liaison, scoping, project management, IA/UX, wireframing, e-commerce design strategy, responsive web design
2013	Arthrem	proposal	Client liaison, scoping, project management, IA/UX, wireframing, e-commerce design strategy
2012 - 2013	Ministry for Primary Industries - e-cert web application	sanCRT.mpi.govt.nz/ecert/main/login	IA/UX consultation, design development, HTML5, CSS, CMS integration partnership with developers, Agile working environment (.jsp-based development environment)
2012	Co-operative Bank	(co-operativebank.co.nz)	Design development, partially responsive XHTML, CSS3, LESS, jQuery, accessibility compliance, testing, content editing (bespoke CMS)
2012 & 2013	Radio New Zealand	(radionz.co.nz)	HTML5, CSS3, LESS, jQuery, accessibility and e-govt compliance - WCAG 2.0 (AA), testing (bespoke CMS)
2012	Kirkaldie & Stains	no longer online	HTML5, CSS3, LESS, jQuery, CMS integration (SilverStripe CMS)

Dates	Website	URL	Work carried out
2012 - 2013	Ministry of Pacific Island Affairs	(mpia.govt.nz)	Client liaison, project proposal and quote x5, project management, IA/UX, wireframing, partial site re-design, XHTML, CSS3, jQuery, testing, site proofing and re-styling (SilverStripe CMS)
2012 - 2017	Te Rito Wellington Family Violence Network	(teritowellington.org.nz)	Logo design, client liaison, project management, scoping, IA/UX, wireframing, theme selection and re-styling, CSS3, jQuery, some PHP wrangling, building the skeleton site, testing, CMS training, QA and ongoing support, some content production management, writing and editing (WordPress CMS)
2012 - 2016	New Zealand Netherlands Foundation	netherlandsfoundation.org.nz	Client liaison, project management, scoping, IA/UX, wireframing, design, XHTML, CSS3, jQuery, accessibility compliance, testing, content editing, building the skeleton site, CMS training, QA and ongoing support (SilverStripe CMS)
2012 - 2016	New Zealand Artificial Limb Service	(nzals.govt.nz)	Client liaison, project management, scoping, IA/UX, wireframing, design, HTML, CSS3, jQuery, accessibility and e-govt compliance - WCAG 2.0 (AA), testing, content production management, writing and editing, building the skeleton site, CMS training, QA and ongoing support (SilverStripe CMS)
2012	Essential Mums	(essentialmums.co.nz)	IA/UX, wireframing, design development
